ELEVATOR CABIN AND COMPONENTS CATALOGUE

Çevreci ve Yeni Nesil
Teknolojik Asansörler

Environmentally Friendly and
New Generation Technological
Elevators

Gemak Asansör bölge sanayisinin gelişimini ve asansör konusunda ki ihtiyacını dikkate alarak 1992 yılında Gebze'de kurulmuştur.

Kurucuları 1982 yılından itibaren asansör ve yürüyen merdiven sektörü içinde kumanda sistemleri, kapı, kabin imalatı, montaj, servis-bakım hizmetleri alanında idareci ve uygulamacı olarak çalışmış bilgi, beceri ve tecrübeleri ile ülkemiz asansör sektörüne ciddi katkı sağlamışlardır. Kurulduğu günden itibaren "En yeni asansör teknolojilerini kullanarak müşterilerine dünya standartlarında çözümler sunmak" ilkesiyle yola çıkan Gemak 41 yıllık süreçte yurt içi ve yurt dışında birçok projeyi başarı ile tamamlayarak ülke sınırlarını aşan firmalardan biri olmayı başarmıştır. 2014 yılında yaptığı yatırımla, 3500 m2'si kapalı olmak üzere 5000 m2 alan üzerine kurduğu Tuzlada fabrikasını faaliyete geçirmiştir.

Müşteri memnuniyetini ön planda tutan GEMAK kısa zaman içerisinde ürün çeşitliliğini, üretim kapasitesini ve müşteri portföyünü genişletmiştir.

GEMAK ,

- Asansörler,
- Yürüyen Merdivenler,
- Engelli Erişim Sistemleri,
- Mekanik-Hidrolik Yük Platformları,

Komple paket asansör sistemleri ve çeşitli asansör ekipmanlarının üretim ve satışında yapmaktadır.

Kurulduğu günden beri müşteri memnuniyetini artırmayı, teknolojik yenilikleri takip ederek modern üretim yapmayı, yurt içi ve yurt dışında pazar payını artırarak ekonomiye katkı sağlamayı hedefleyen GEMAK, ileriki yıllarda ulaştığı bu hedefleri bir üst seviyeye taşımak için, özveriyle çalışmalarını sürdürmektedir.

Gemak Elevator was established in Gebze in 1992, taking into account the development of the regional industry and the need for lifts.

Since 1982, the founders have worked as managers and practitioners in the field of control systems, door, cabin manufacturing, assembly, service-maintenance services in the elevator and escalator sector and have made a significant contribution to the elevator sector of our country with their knowledge, skills and experience. Gemak, which has set out with the principle of "Providing world-class solutions to its customers by using the latest lift technologies" since the day it was founded, has successfully completed many projects in Turkey and abroad in 41 years and has succeeded in becoming one of the companies that exceed the borders of the country. In 2014, with the investment it made in 2014, it put its factory into operation in Tuzla, which was established on an area of 5000 m2, 3500 m2 of which is closed.

GEMAK, which prioritises customer satisfaction, has expanded its product range, production capacity and customer portfolio in a short time.

GEMAK ,

- The Elevators,
- Escalators,
- Disabled Access Systems,
- Mechanical-Hydraulic Load Platforms,

It also manufactures and sells complete package lift systems and various lift equipment.

Since the day it was founded, GEMAK aims to increase customer satisfaction, to make modern production by following technological innovations, to contribute to the economy by increasing its market share both at home and abroad, and continues to work devotedly to carry these targets to the next level in the coming years.

► *İnce detaylarda fark yaratan çarpıcı tasarımlar*

► *Impressive design and elegant details that make*

PROFESSIONAL ELEVATOR SOLUTIONS

KOMPLE ASANSÖR SİSTEMLERİ

COMPLETE ELEVATOR SYSTEMS

MR ELEVATOR - MAKİNE DAİRELİ

MRL ELEVATOR - MAKİNE DAİRESİZ

PROFESSIONAL ELEVATOR SOLUTIONS

MR Sistem (Makine Daireli Sistem)

Makina daireli asansörlerimizin, 30 kata kadar olan binalarda, 3000 kg. kapasiteye ve 2,50 m/sn hıza kadar, tesis edilebilme imkanı vardır. Makine daireli yüksek kapasiteli asansörler özellikle yolcu terminalleri, çok katlı mağazalar, alışveriş merkezleri ile eğitim, kültür ve sağlık kuruluşları için uygun bir çözüm oluşturmaktadır. VWF kontrolü son derece sessiz ve konforlu bir seyir sağlarken, düşük motor devirlerinde de sistemin güvenliğini en üst düzeye çıkartmaktadır.

MR Systems (Machine Room Systems)

Our machine room elevators can be installed in buildings up to 30 floors, up to 3000 kg. capacity and 2,50 m/sec speed. High capacity elevators with machine room are especially suitable for passenger terminals, multi-storey stores, shopping centres, educational, cultural and health institutions. VWF control provides an extremely quiet and comfortable ride and maximises the safety of the system at low engine speeds.

GEARBOX MACHINE

MRL Sistem (Makine Dairesiz Sistem)

Makina dairesiz asansörlerimizin, 30 kata kadar olan binalarda, 3000 kg. kapasiteye ve 2,50 m/sn hıza kadar, tesis edilebilme imkanı vardır. Makine dairesiz yüksek kapasiteli asansörler özellikle yolcu terminalleri, çok katlı mağazalar, alışveriş merkezleri ile eğitim, kültür ve sağlık kuruluşları için uygun bir çözüm oluşturmaktadır. Geleneksel motorlara göre %40'a varan enerji tasarrufunun yanısıra, dişli kutusunun olmaması nedeniyle yıpranma son derece az olmaktadır. Sistemin yağsız olması çevre kirliliği ve yangın tehlikesini tamamen ortadan kaldırmaktadır. VVVF kontrolü ise son derece sessiz ve konforlu bir seyir sağlarken, düşük motor devirlerinde de sistemin güvenliğini en üst düzeye çıkartmaktadır.

MRL Systems (Machine Roomless Systems)

Machine roomless systems elevators can be assemble the buildings that have max. 30 floors , 3000 kilograms , 2,50 meter/second. Machine roomless systems elevators are used in passsenger terminal facilities, hospitals, schools,malls. Compared with a conventional engine up to 40% energy savings in addition to the gearbox is extremely less due to the lack of wear the system works without oil, this situation eliminates anviromental pollution and the danger of fire. Control vvvf provides extremely quiet and comfortable journey. Also low engine speed puts security of the system up high point.

GEARLESS MACHINE

KOMPLE HİDROLİK ASANSÖR SİSTEMLERİ

COMPLETE HYDRAULIC LIFT SYSTEMS

Hidrolik asansörler, elektrikli motorunun tahrik ettiği hidrolik pompa ünitesinin yağı itmesi veya çekmesi ile pistonun hareketi ile kabinin tahrik kabiliyetini sağlayan sistemlerdir.

Genel olarak kullanılan tahrik sisteminde yukarı yönde hareket motor-pompa ile aşağı yöne hareketlerde ise asansör kabininin kendi ağırlığı kullanılır.

Tahrik sisteminde bir diğer alternatif ise hidrolik silindirin motor-pompa ünitesinin sürücü ile hem yukarı hem de aşağı yönde hareketini sağlayan sistemdir.

Hidrolik asansörün makine dairesi genellikle zemin katta olacak şekilde projelendirilir. (Ancak binada istenilen katta makine dairesi olabilir. Kuyu + - 5 Mt.) Makine dairesinde, bir yağ kazanı (Tank) ve bunun üzerinde hidrolik sistem, kumanda panosu ve hidrolik sıvısının içinden geçtiği hortumlar bulunmaktadır.

Bu sistemde, asansör kuyusu içerisinde; asansör kabini, taşıyıcı karkas, silindir piston sistemi, askı tertibatı, tamponlar varsa karşı ağırlık tertibatı bulunmaktadır.

Hidrolik asansörler, yolcu ve yük taşımak için uygundur. Hidrolik asansörler, 2 ile 9 kat arasındaki yükseklikte 0.12 m/sn ile 1 m/sn hızlarında çalışabilir. Tek silindirli hidrolik asansörler, 240 kg ile 10.000 kg kadar ağırlığı, Çift silindirli hidrolik asansörler, 1500 kg ile 40.000 kg kadar ağırlığı taşıyabilirler.

Hidrolik asansörler düşük katlı binalarda kullanılır insan taşınmasından daha çok yük taşımada tercih edilir.

Hydraulic lifts are systems that provide the drive capability of the cabin with the movement of the piston by pushing or pulling the oil of the hydraulic pump unit driven by the electric motor.

In the generally used drive system, the upward movement of the motor-pump and the downward movement of the lift car's own weight are used.

Another alternative in the drive system is the system that provides both upward and downward movement of the hydraulic cylinder with the drive of the motor-pump unit.

The machine room of the hydraulic lift is usually designed to be on the ground floor. (However, there can be a machine room on any floor in the building. Well + - 5 Mt.) In the machine room, there is an oil boiler (tank) and hydraulic system, control panel and hoses through which the hydraulic fluid passes.

In this system, in the lift shaft; lift cabin, carrier carcass, cylinder piston system, suspension device, buffers, if any, counterweight device.

Hydraulic lifts are suitable for carrying passengers and cargo. Hydraulic lifts can operate at speeds of 0.12 m/sec to 1 m/sec at heights between 2 and 9 floors. Single cylinder hydraulic lifts can carry 240 kg to 10.000 kg weight, double cylinder hydraulic lifts can carry 1500 kg to 40.000 kg weight.

Hydraulic lifts are used in low-rise buildings and are preferred for load transport rather than human transport.
